6200 W. 3rd Street

Los Angeles CA 90036

**ASSIGNED MISSIONS:**

Live Wire, \*BlackOp's, Triple Play, Frozen Assets, Machine Head, Black Sunshine

**BACKGROUND INFO:**

No criminal record on file. Obtained a masters degree in chemical engineering with a minor in computer science. Has worked for three main chemical and biological hazards companies in years past. Applied for and accepted into United States government biological security operations department or US-BSO in 2003. Was accepted into The Agency shortly after. Commendations and recommendations are exemplary. Has been on several black ops missions not listed. Created revolutionary vaccination for Saschinfinitus, a mutated terrorist inflicted strain of influenza. Leonard Christopherson is one of the Agency's lead on most missions involving biological and/or chemical terrorism.

In 2004, researched in Prague, Czech Republic under Dr. Jozef Krivosova on an international foreign grant for the intense study of microbial viral research. Helped work on an unidentifiable mutated strain of influenza and streptococcus created by Dr. Krivosova. Agent left before the project was finished and was his belief that the mutation of the two strains was highly unlikely and not worth further pursuit. Agent has been an advocate for foreign viral research in many countries and nations. Now possesses many supporters in his many international endeavors and on missions.
