53 _____ Macleay St. 2011 _____

Sydney _____ Australia _____

ORGANIZATION BACKGROUND:

Founded in late 1994 by a conglomerate of European investors, Cylex Systems is one of the worlds leading developers of advanced genome mapping systems software and technology. The company has excelled in adapting to the latest shifts in technology throughout the world. They have produced many different biological modeling software systems for numerous governments and private agencies all over the world.

In 2000, a corporate takeover ensued and the company was bought out and moved to Australia where many corporate shares resided. The company has maintained a very lucrative economic position within the Genome arena where hopes of advances are optimistically foreseen.

A story about the company was ran in the local Sydney newspaper in 2008 about the company and its genetic and lack of religious reflections and implementations in doing business to the world. A rebuttal of anything unethical in the designing of their software and testing was later published as they welcomed the publicity, opened their doors and let the world inside their walls. Within a week, Cylex Systems' stock almost doubled on the world market as many investors saw the company as the next big thing in modern technology and advancements.
