

ORGANIZATION NAME: Hikoratachi Corporation

ORGANIZATION TYPE: Corporation

ORGANIZATION FOUNDED DATE: 11/25/1979

KNOWN CONTRIBUTORS:

NAME: Shouling Hikoratachi **NAME:**

NAME: **NAME:**

PRIMARY ADDRESS:

SECONDARY ADDRESS:

257 Third St. N

San Jose CA 95101

ORGANIZATION BACKGROUND:

The Hikoratachi Corporation was formed out of two smaller technical engineering companies in the late 1970's. It was owned and operated by a conglomerate of shareholders as a startup micro processing manufacturer. The company entered into the tech race and was firmly established in the Silicone Valley region of San Jose, California as a manufacturer of highly capacitated computer transistor chips in 1983. The company has been known for having some of the most intelligent computer scientist working for it. A cultural transition towards a more influential Japanese run organization transcribed with the election of Shouling Hikoratachi to the position of executive president. Stocks, shares and company assets doubled within the second year of Shouling's election and the company was mass-producing its microprocessors worldwide by 1986. The Hikoratachi Corporation has been a leader in it's market and has put several smaller companies out of business along with acquiring some along the way. The company merged three more times in 1987, 1992 and 1995 with three of the five remaining computer chip manufacturing competitors, making it the one of the largest and most powerful technical companies of the day. Allegations were rumored of the company having affiliations with militant factions and/or left wing extremists groups, particularly executive president Shouling Hikoratachi. A federal investigation was launched into these allegations, which in turn sparked a hostile takeover from the company's remaining shareholders, but failed to happen. The company was later awarded a federal defense computer contract in 1999 for producing super conductive micro transistor computer chips for the government. It succeeded very well in achieving one of the most productive and fastest micro processor in the world. Again, allegations were rumored of possible illegal sales and profiteering of these computer chips, which lead to another attempt of a hostile takeover, and once again was unsuccessful. Since 2001, no hostile takeover has ever been tried again, since Shouling Hikoratachi bought out and owns 65% of the corporation. A transition towards a high quality of standards was implemented in 2002. With this transition, a report of the company trying to produce self-powered super conductive micro transistor computer chips, which would revolutionize the industry, was rumored. In 2004, the Hikoratachi Corporation was nominated for the "Achievement of Excellence" award, for being one of the pioneering leaders in the technology of producing super conductive micro transistor computer chips. It is said the company has a net worth of three hundred and fifty billion dollars, in which the company has recently expanded it's research and development department along with obtaining many foreign and domestic governmental and private sector technical contracts. The company flourishes to this day.
